MIRROR

02 Constraints:

The project has a low ceiling height of only 2.5 meters, resulting in limited vertical space, small floor area, dim indoor lighting, and poor natural light penetration.

1 Mirror:

By reflecting through mirrors, it breaks through the height limitation, visually enlarging the space, reflecting a mere 2.5M ceiling height to 5 meters or more.

2 Light Wall:

The walls are made of translucent jade glass (an eco-friendly recycled material), with LED strips installed inside. The light passing through the jade glass overcomes the dimness of the space.

3 High-gloss materials :

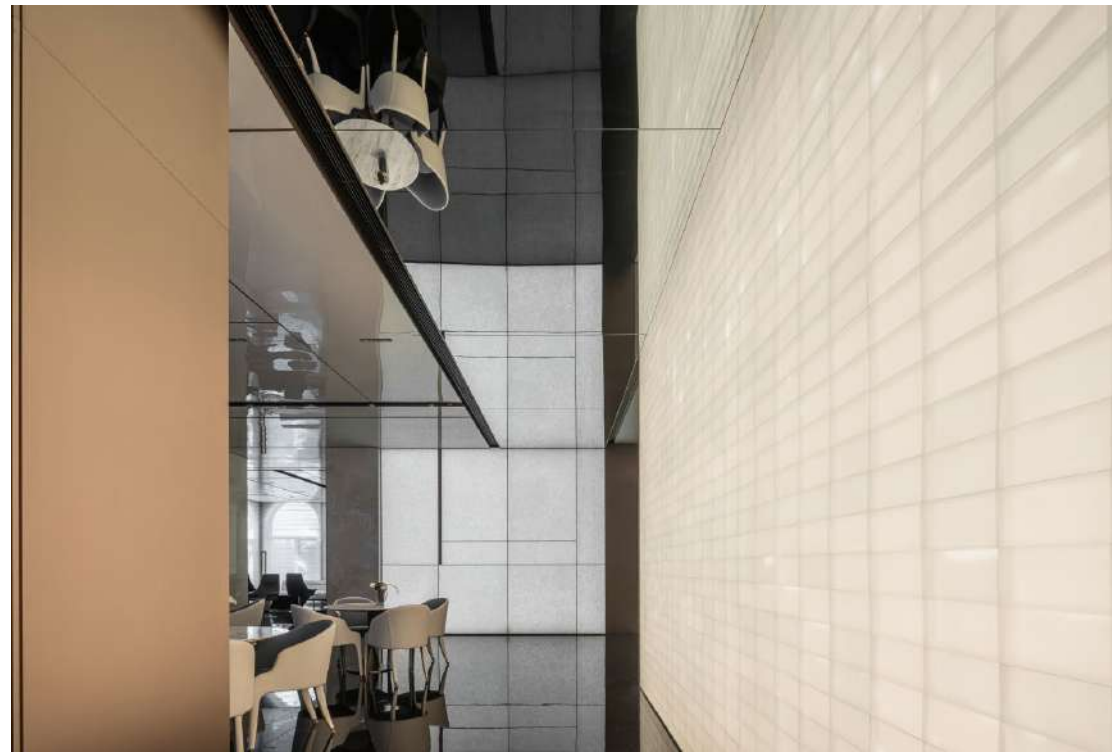

Reflective stone materials and bright lacquer finishes expand the visual effect of the space.

03 PRODUCTION OR REALIZATION TECHNOLOGY (AND MATERIALS)

Jade Glass

Jade glass is a special decorative material that combines the transparency of glass with the texture beauty of jade stone, creating a bright indoor environment.

Ceiling Panels: Dekton Slim Jade Stone Panels

Utilizing large-sized, lightweight, fusion, and recyclable Dekton Slim jade stone panels for ceiling and wall decoration, achieving seamless integration between the walls and ceilings, enhancing aesthetic appeal, and expanding the visual perception of space.
